

# E-Health Strategy

► Brussel 10 October / Bruxelles 10 Octobre 2007

Didier Pujol  
Fondateur DPM Services

*De zorgsector is vandaag onderhevig aan zware druk en omwentelingen op vlakken van organisatie en het nuttig aanwenden van gegevens, enerzijds met het oog op een betere patiëntenzorg anderzijds in het kader van de evolutie van het financieringsmechanisme.*

*De vraag naar strategisch beleid van de instelling staat bovenaan op de agenda.*

*De invoering van de Minimale Ziekenhuis Gegevens (MZG) en de daarmee gepaard gaande integratie van MKG, MVG, MUG, etc. heeft haar weerslag op het dagelijkse zorgproces.*

*En tenslotte is er de forfaitarisering van de zorg.*

*Het geheel van deze veranderingen noopt tot een grondige reflectie over zowel de organisatie als de veranderende infrastructures, maar meer nog over de strategieën die we hierbij hanteren.*

*Le secteur de la Santé connaît aujourd'hui des profonds bouleversements en matière d'organisation et de prise en charge des informations patients et des modes de financement, posant plus que jamais la question de la gestion stratégique des établissements de santé.*

*La mise en place du Résumé Hospitalier Minimum (RHM) impliquant l'enregistrement intégré des RCM, RIM, SMUR, etc. impacte significativement les processus de soins.*

*Enfin le paiement à l'acte ou à la pathologie est un fait.*

*L'ensemble de cette évolution mène à une réflexion approfondie tant à l'organisation et le changement des infrastructures (Informatique incluse) qu'aux stratégies les accompagnant.*

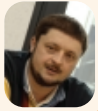

Vrije Universiteit Brussel

8:30 - 9:00

**introduction**

**Didier Pujol**, Fondateur DPM Services

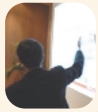

9:00 - 09:30

Paperless, Filmless :  
les enjeux de la dématérialisation du dossier patient  
**Benoît Debande**, Cliniques Saint Luc UCL

9:30 - 10:00

The Integration Challenge of a Hospital Information System ...  
**Dr. Marc Nyssen**, Facultéit Geneeskunde & Farmacie,  
Vrije Universiteit Brussel

10:00 - 10:30

The Wallony Health Network  
**André Vandenberghe**, CH Charleroi

10:30 - 11:00

Insights on Health good practices in Europe  
**Beaudouin Lejeune**, Hine

11:00 - 11:30

**Pause**

11:30 - 12:00

Agfa solutions for Healthcare  
**Eric Maurincomme**, Agfa

12:00 - 12:30

Federation of French Healthcare Industries  
European stakes in the healthcare sector  
**Yannick Motel**, Lesiss

12:30 - 13:10

**Round table discussion**

Specialisation and quality management: How IT can help

13:10 - 13:40

Stakes of e-Health strategies  
**Marc Bangels**, SPF Santé publique/FOD Volksgezondheid  
(Bruxelles/Brussel)

13:40 - 14:40

**Lunch**

**Marc Bangels, SPF Santé publique/FOD Volksgezondheid**

The use of telematics in health care has profoundly changed the relationship between patients and health care providers. These changes not only have large number of technical and legal consequences but, above all, have a considerable ethical, social and organisational impact.

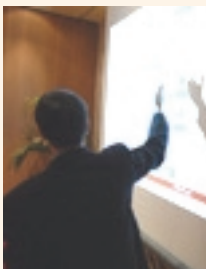

**Stakes of e-Health strategies**

**Dr. Marc Nyssen, Faculteit Geneeskunde & Farmacie, Vrije Universiteit Brussel**

Marc Nyssen teaches Computer Science and Medical Informatics, moreover, he is responsible for the development and management of the Medical Faculty's Internet at the V.U.B.'s Life Sciences Campus in Jette, Brussels.

**The Integration Challenge of a Hospital Information System ...**

**André Vandenberghe, CH Charleroi**

The aim of the Wallony Health Network is to help on integrating the healthcare process between hospitals and healthcare professionals in Wallonny . The overall benefit consists in a shorter hospitalisation period for patients, an enhanced quality and a faster communication process.

**The Wallony Health Network**

**Beaudouin Lejeune, Hine**

The HINE service started with the help of the European Commission and evolved into a self-sustaining subscription-based service hosted by Deloitte. One of these actions is to set up a 'World Class' market information service to meet the needs of those participating as users or suppliers in the market for healthcare ICT.

**Insights on Health good practices in Europe**

**Benoît Debande, Cliniques Saint Luc UCL**

Révéls au moment où l'hôpital décide réellement d'arrêter la circulation du dossier papier traditionnel de nouveaux enjeux apparaissent et posent question tant sur le plan informatique que sur le plan clinique. L'objectif de cet exposé est de mettre en évidence certains de ces enjeux ainsi que d'ébaucher des pistes de solution.

**Paperless, Filmless : les enjeux de la dématérialisation du dossier patient**

**Yannick Motel, France's health and social care IT suppliers**

Yannick Motel is chief executive of France's health and social care IT suppliers' organisation, Lessis. Lesiss has built a strong network of IT-focussed players within France and Europe to promote interoperability of technologies and sustainable e-Healthcare investment policies

**European stakes in the healthcare sector**

**1000s of formats - 1 Data Center**

Your facility's clinical data is one of your most valuable assets. But it is often disparate, disjointed and separated into multiple formats and departmental silos. That makes it inaccessible to many key stakeholders during a patient's care process. Imagine a solution that could quickly receive and store petabytes of data, while structuring information in a way that made it securely accessible for viewing and sharing. Could that help your diagnostic options? Could it be the foundation for your facility's enterprise information architecture today? Or your EPR tomorrow? Find out what the UK's National Health Service already knows about the power of Agfa HealthCare's Clinical Data Center™ solution by visiting [www.agfa.com/datacenter](http://www.agfa.com/datacenter)
